

Consumer Product Inspections

Ensuring your contract manufacturers adhere to your company's strict quality requirements is one of your most difficult jobs. STR's in-depth inspection system can help to detect variances at the factory or warehouse during TOP, In-Process and /or final stages of production. With experienced hardlines and softlines technical staff on six continents, STR can design and implement a global inspection program that will meet your quality assurance needs.

STR Inspections deliver unparalleled quality solutions, no matter where you source in the world:

- **Top of Production (TOP) Inspections** are performed at the start of production while the first several dozen pieces are being produced. The product is evaluated for conformance with the client's specifications.
- **In-Process Quality Checks (DUPRO)** provide a snapshot of the factory's operations at predetermined points after production has started, but before the majority of the order is completed.
- **Final Random Inspections (Pre-shipment)** are conducted before the product leaves the warehouse. These inspections serve as a vital final check on product quality, packaging, shipment quantities, product labeling, carbon markings and any other areas of concern.
- **Loading Inspections** are conducted to ensure that the correct product, in the right quantity is being loaded at the factory and at the port, with up-to-the-minute shipping schedule information.

What distinguishes STR Inspections:

STR has an experienced worldwide team in place with expertise in nearly every consumer product category. Our quality assurance inspections, conducted at the factory, warehouse or port, are a cost effective means to help ensure that products meet your quality standards prior to shipment.

STR Works For You

Strategically located throughout the world with laboratories and inspection and auditing offices on six continents, we provide testing, audit, inspection, and responsible sourcing services. STR helps clients mitigate supply chain risks and achieve product success in the global marketplace.

Raising the world's expectation of product quality, safety and supply chain responsibility
