

STR India Obtains Prestigious Marks & Spencer Test Laboratory Accreditation

STR India has been accredited as an official apparel testing laboratory by Marks & Spencer. This accreditation enables STR India to conduct a wide range of physical and chemical testing including color fastness, durability wash for garments and components, assessment of non iron fabrics and products, thermal stability, tensile strength and many other properties for Marks & Spencer's apparel categories.

STR India's Manesar facility is a 16,500 square foot, state-of-the-art testing laboratory built with an investment of over \$2 million. The facility offers a broad range of testing and quality assurance services for retailers, manufacturers, importers, and distributors of apparel, textile, and leather products, with capabilities to test products for flammability, fiber content, colorfastness, dimensional stability, strength, performance, construction, aging, and chemical analysis to major American, European, and International standards.

STR has served its global client base in India since 2004, with product quality inspections, social responsibility services, supply chain security services, and technical consultations throughout India. The Manesar facility serves as STR's regional headquarters for the Indian Subcontinent, with oversight of staff located throughout Sri Lanka, Bangladesh, and Pakistan.
